Maintenance sheet 63V151-3

A. Troubleshooting

If the error code is indicated on the 7-Seg-LED on the PCB (Part #702) of the water heater (and/or the remote controller), refer to Section B.

<< It takes long time to get hot water at the fixtures >>

- · The time it takes to deliver hot water from the water heater to your fixtures depends on the length of piping between the two. The longer the distance or the bigger the pipes, the longer it will take to get hot water.
- If you would like to receive hot water to your fixtures quicker, you may want to consider a hot water recirculation system.

<< The water is not hot enough or turns cold and stays cold >>

- · Compare the flow and temperature. Refer to the "Output temperature chart" of the installation manual.
- Check cross plumbing between cold water lines and hot water lines.
- Check if the gas supply valve fully open, the gas line sized properly and the gas supplies pressure enough. Refer to the "Gas supply and gas pipe sizing" of the installation manual.
- Check the set temperature, and change the dipswitch setting. Refer to Section D.
- · Refer to "Water circuit" in this section.

<<The water is too hot>>

B. Error codes

111: Ignition failure

031: Incorrect dipswitch setting

heater to correct one.

101: Warning for the "991" error code

clearances" of the installation manual

1. Check gas supply and inlet gas pressure.

water heater prepares for combustion.

*No sparking sound

*No kick sound

when water heater goes into combustion.

termination clearances" of the installation manual.

· Check if there is dust and lint in heat exchanger.

2. Check if the Hi-limit switch (Part #403) is properly functioning.

O.H.C.F (Part #402) is breakage, Consult the manufacturer.

7. Check if there is leaking from heat exchanger (Part #401 or 444).

8. Check if there is dust and lint in nozzles of the manifold (Part #114).

Check the set temperature, lower setting temperature.

<<The hot water is not available when a fixture is opened>>

Refer to the "Power supply circuit" and "Water circuit" in this section.

<<Fluctuation in hot water temperature>>

- Check if the filter on the cold water inlet cleaned. (Part #437)
- Check if the gas line sized properly and the supply gas pressure sufficient.
- Check for cross connection between cold water lines and hot water lines.
- · Refer to "Water circuit" in this section.

<< Unit does not ignite when water goes through the water heater>>

- Refer to the "Power supply circuit" and "Water circuit" in this section.
- If you use the remote controller, turn the power button on and then the green LED will

· Check the gas type of the water heater. If it's wrong gas type model, replace the water

· Check if there is any blockage (For example, Damper sticking, Vent Flaps installed on the

terminator, Snow build up around terminator, Installed in a closet (No ventilation or lack

of combustion air)) in the intake air and/or exhaust. Refer to the "Vent termination

· If the water heater is installed as a direct-vent system, check whether there is enough

· Check if there is grease and/or dirt in the burner (Part #101) and the fan motor (Part

3. Check for connection/breakage of wires (Part #111, 402, 705, 707), burn marks on the

4. Check if there is a buzzing spark ignition sound coming from the burner (Part #101) when

5. Listen for the double "clunk" sound coming from the gas valve assembly (Part #114)

6. (Only no sparking and/or kick sound) Check voltage on each wire to gas valves assembly

9. Check current on the flame rod (Part #103). Refer to the #3 at "Appendix A" in Section C.

computer board (Part #701), and/or soot on the flame rod (Part #103). And then if

(Part #114) and/or the igniter (Part #102). Refer to the "Appendix A" in Section C.

computer board (Part #701), and/or soot on the flame rod (Part #103). And then if

• Check if the total vent length doesn't exceed 50 ft and the # of elbows is less than 5Ea.

#416), especially if the water heater has been installed in a contaminated area.

Check the manifold pressure of the water heater. Refer to installation manual.

Check the altitude/elevation of area of where the water heater installed.

distance between the intake air terminal and the exhaust terminal. Refer to the "Vent

Check if the filter on the cold water inlet cleaned. (Part #437)

• Check the dipswitch settings on the PCB. Refer to Section **D**.

· Refer to "Water circuit" in this section.

<<The fan motor still spinning after operation has stopped>>

This is normal. After operation has stopped, the fan motor keeps running from 35 seconds in order to re-ignite quickly, as well as purge all the exhaust gas out of the flue.

<<Abnormal sound from water heater>>

An abnormal sound from the water heaters is caused by not enough air supply or wrong installations. The water heater needs more combustion air. Refer to the "101" error code in the section B

<< Power supply circuit>>

- 1. If the remote controller installed, press the "ON/OFF" button of the remote controller, and make sure that the green LED on the "ON/OFF" button of the remote controller is lit.
- 2. Check if that the 7-Seg LED on the PCB (Part #702) of the water heater is lit. If so, the power supply circuit of the water heater is under normal condition. Next, refer to the "Water circuit" in this section.
- 3. Check the fuse on the surge box (Part #722), and if it has a brown spot, need to replace it.
- 4. Check the power supply, and make sure that the water heater has 120 VAC. 5. If the 7-Seg LED on the PCB (Part #702) isn't lit, some electrical parts can be broken.

Consult the manufacturer.

- 1. If you set the remote controller, turn the power button on and then the green LED will
- 2. Open all hot water faucets, and make sure that there is enough water flow. This water heater needs at least 0.5 GPM water flow to operate.
- 3. Check for reverse connection and cross connection.
- 4. Check if the filter on the cold water inlet cleaned. (Part #437)
- 5. Check if there is no debris or obstruction on the fixtures.
- 6. Check if water ways in the water heater are frozen. If so, unfreeze them. And refer to installation manual to protect your water heater from freeze.
- 7. Check if the inlet water pressure is higher than 40 psi. And if it's lower than 40 psi, need to increase the pressure.
- 8. Check for connections and breakage of wires (Part #418, 421).
- 9. Check if the motor drive of the water control valve (Part #418) is locked due to scale buildup, and/or water leakage. Consult the manufacturer.

391: Air-fuel Ratio Rod failure

<<Water circuit>>

Check for connection/breakage of wires (Part #705) and/or soot on the AFR rod. (Part #103).

441: Flow Sensor failure (Only Easy-Link system)

Check for connection/breakage of wires and/or debris on the flow sensor impeller (Part #421).

510,551: Abnormal Main and Gas Solenoid Valve

- · Check for connection/breakage of wires (Part #707) and/or burn marks on the computer board (Part #701).
 - · Reset power supply of the water heater.
- · Check voltage on the each valve on the gas valves assembly (Part #114). Refer to the "Appendix C" in Section C.

611: Fan motor fault

- Check for connection/breakage of wires, dust buildup in the fan motor (Part #416) and/or burn marks on the computer board (Part #701).
- · Check for frozen/corrosion of connectors of the fan motor (Part #416).
- · Check voltage between blue wire and each wire of the fan motor (Part #416), and check resistance between white wire and red wire. Refer to the "Appendix B" in Section C.

631: External pump failure

Check whether the pump connected to central computer board works properly.

651,661: Water control valve fault (Only Easy-Link system)

- Check the water control valve (Part #418), connection/breakage of wires (Part #418), motor drive locked due to scale buildup, and/or water leakage.
- · Check voltage between black wire and red wire. Refer to the "Appendix F" in Section C.

681: External fan motor failure

Check whether the external fan motor connected to central computer board works properly

701: Computer board fault

· Check for connection/breakage of wires (Part #707) and/or burn marks on the computer

board (Part #701).

721: False flame detection

- 2. For indoor models, check if condensate drain is installed on the vent collar of the water heater.
- 3. Check if there is leaking from heat exchanger (Part #401 or 444).

- 1. Check the model type of the remote controller. Model No. 9007603005 (TM-RE30) is the correct one.
- "Remote controller connections" of the Installation manual.
- 4. If this error code appears only the 7-Seg LED on the PCB (Part #702), check the voltage on the remote controller terminal on the PCB. Refer to the "Appendix E" in Section C.
- 6. If this error code appears both the PCB (Part #702) and the remote controller, replace the

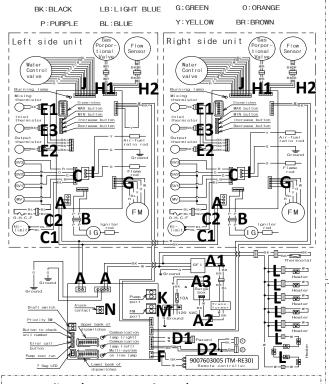

761: Miscommunication between Parent unit and Child units for Easy-link system

Check if the connections between the parent unit and the child units are correct. Refer to "Easy-Link system" section in the Installation manual.

991: Imperfect combustion

· Refer to the "101" error code in this section.

C. Wiring Diagram a<u>nd check point of the Water heater</u>

Appendix A (For error code 111)

Check these points during ignition stage.

#1. Refer to check point "B" on the wiring diagram above. Check voltage between purple wires (Normal: 90 to 110 VAC)

This Check point is normal?

Yes >> Replace the igniter (Part #102)

No >> Go to Next

2. Refer to check point "C" and "H1" on the wiring diagram above Check the voltage bellows.

C: Between blue wire and light blue wire (#3).

(Normal: 78 to 100 VDC)

C: Between blue wire and orange wire (#53). (Normal: 78 to 100 VDC)

H1: Check the voltage between white wire and red wire. (Normal: 1 to 15 VDC)

These check points are normal?

Yes >> Replace the gas valves assembly. (Part #114) No >> Replace the PCB. (Part #701)

#3. Check current thought the orange flame rod wire (Part #705). (Normal: more than 1uA)

This check point is normal during operation? Yes >> Replace the PCB. (Part #701)

>> Replace the flame rod. (Part #103)

Appendix B (For error code 611)

Refer to check point "G" in the diagram to the left and followings.

 Check voltage between red wire and blue wire. (Normal: 110 to 160 VDC)

- Check voltage between yellow wire and blue wire. (Normal: 13 to 17 VDC)
- Check voltage between orange wire and blue wire (Normal: 2.0 to 6.5 VDC)

All check points are normal?

Yes >> Replace the fan motor. (Part #416) No >> Replace the PCB. (Part #701)

Appendix C (For error code 510 and 551)

Refer to check point "C" in the diagram to the left and followings. Check voltage on the each valve on the gas valves assembly.

- Between blue wire and light blue wire (#3). (Normal: 78 to 100 VDC)
- Between blue wire and green wire (#9). (Normal: 78 to 100 VDC) • Between blue wire and orange wire (#53). (Normal: 78 to 100 VDC)
- Between blue wire and red wire (#73). (Normal: 78 to 100 VDC)

All check points are normal?

Yes >> Replace the gas valves assembly. (Part #114) No >> Replace the PCB. (Part #701)

Appendix D (For error code 311, 321 and 331)

- · Mixing thermistor (Find the marking of No.113 on the connector) Check point "E1"
- Output thermistor (Find the marking of No.12 on the connector) Check point "E2"
- Inlet thermistor (Find the marking of No.42 on the connector) Check point "E3"

Check resistance between black wire and black wire.

Tomporatura	°F	50	59	68	77	86	95
Temperature	°C	10	15	20	25	30	35
Resistance	kΩ	15.4	12.6	10.3	8.5	7.0	5.9

All check points are normal?

Yes >> Replace the PCB. (Part #701)

No >> Replace the wrong thermistor. (Part #405, 424, 430)

Appendix E (For error code 741)

Refer to check point "F" on the wiring diagram above. Check voltage on the remote controller terminal on the PCB. (Normal: 11 to 15 VDC)

This check point is normal? Yes >> Replace the remote controller.

No >> Replace the PCB. (Part #702) Appendix F (For error code 651 and 661)

Refer to check point "J" on the wiring diagram above. Check voltage between black wire and red wire. (Normal: 13 to 16 VDC)

This check point is normal?

Yes >> Replace the Water control valve. (Part #418)

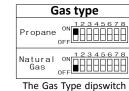

No >> Replace the PCB. (Part #701)

D. Dipswitch Settings on the computer board of the water heater

Change the dipswitch settings when the power supply is turning off. The dark square is the direction the dipswitch should be set to. DEFAULT is the factory setting.

<Upper bank of dipswitches>

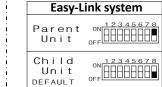

The upper bank has certain special functions and generally should not need adjustment.

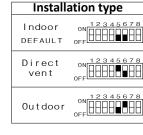

should already be properly preset from the factory.

<Lower bank of dipswitches> The lower bank has settings for

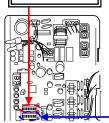

three functions, shown below.

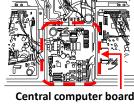

Single unit is the same as the child unit.

Upper bank

Lower bank

Temperature set 115°F (46°C) 135°F 155°F 185°F

(40°C) 145°F (63°C)

121: Loss of flame 1. Check gas supply and inlet gas pressure. 2. Check if the Hi-limit switch (Part #403) is properly functioning. 3. Check for connection/breakage of wires (Part #111, 402, 705, 707), burn marks on the

>>>> Refer to the #1 at "Appendix A" in Section C.

>>>> Refer to the #2 at "Appendix A" in Section C.

- O.H.C.F (Part #402) is breakage. Consult the manufacturer. Check if there is leakage from heat exchanger (Part #401 or 444).
- Check if there is dust and lint in nozzles of the manifold (Part #114).
- 6. Check current on the flame rod (Part #103). Refer to the #3 at "Appendix A" in Section C.

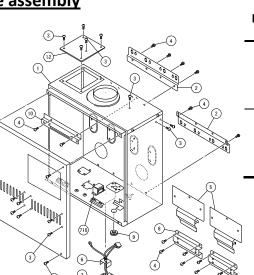

311,321,331: Disconnected/short-circuited thermistor

Check for connection/breakage of wires and/or debris on thermistor (Part #405, 424, 430, 704). · Check thermistor resistance. Refer to the "Appendix D" in Section C.

- 1 Clean the flame rod (Part #103)
- 741: Miscommunication between water heater and remote controller
 - 2. Inspect the connections between the water heater and remote controller. Refer to the
 - 3. Check the power supply of the water heater.
 - 5. If this error code appears only remote controller, replace the PCB (Part #702).
